

Straw Rocket (v1.0)

January 12, 2019

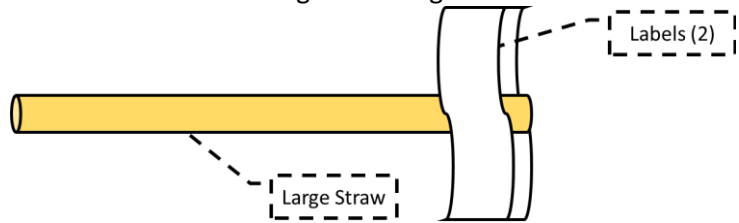

Discover More at www.KansasSpaceTech.com

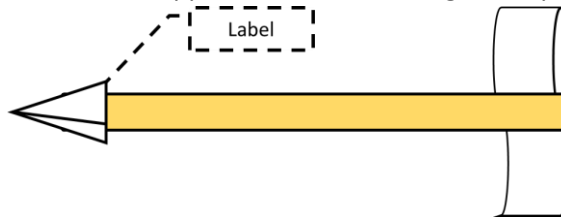

1. Place a label sticky side up on a table
2. Place end of large straw on the label

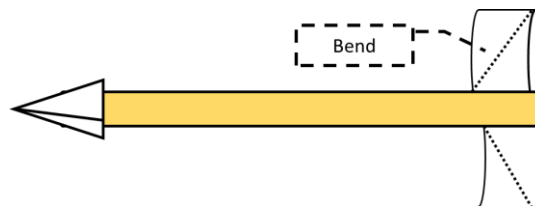

3. Place label sticky side down onto the label and straw starting at one edge of the label. This creates the fins of the rocket.

4. Using the third label, wrap it around the end opposite the fins to bring it to a point. This is the nose cone.

5. To make the rocket fly better bend the fins at an angle, this will cause the rocket to spin.

6. **Put on safety glasses.** Insert small straw into the newly created straw rocket. Place the small straw to your lips, point in a safe direction, and blow.
